- **Running instance:** <http://osr-adap.cs.fau.de/ws14/Groeger/>

2 Homework

I added comment specifying the different existing collaborations. No substructuring was required because the responsibilities were clear enough.

The existing collaborations in the beer domain are as follows:

- BeerStyle in the TypeObject role collaborates in a TypeObject collaboration with Beer, which in turn fulfils the BaseObject role.
- BeerFactory in the Manager role collaborates in a DomainObject collaboration with Beer, which in turn collaborates with the BeerFactory as the Domain Object.
- BeerPhoto has a DomainObject collaboration with Beer. BeerPhoto takes the role of a Client and the Beer that of a DomainObject.
